Propedeutics of Internal Medicine

Question Checklist for Practical Skills for Final Module Control

For specialty 7.110101 «General Medicine»

Department – propedeutics and internal medicine

Head of department

Associate Member of NAMSc of Ukraine,
DSc, Professor G.A. Ignatenko

Checklist of Practical Skills

1. Scheme of case recording. Main parts of anamnesis
2. General inspection
3. Palpation of lymph nodes and characteristic of received data
4. Inspection of head and neck
5. Inspection of trunk and limbs
6. Static inspection of the chest, diagnostic value of main symptoms
7. Dynamic inspection of the chest, diagnostic value of main symptoms
8. Inspection of heart region, diagnostic value of main symptoms
9. Inspection of abdomen, determination of main symptoms
10. Palpation of the vessels
11. Measurement of systolic and diastolic pressure and rules of its taking, pulse pressure
12. Palpation of the chest, sequence, clinical value of main symptoms
13. Palpation of the heart region, sequence, clinical value of main symptoms
14. Palpation of the mammary gland
15. Superficial palpation of abdomen, interpretation the received data
16. Rules and principles of deep sliding palpation according to Obratzsov's method
17. Palpation of sigmoid, caecum and terminal part of ileum, their normal features
18. Methods of determination of greater curvature of stomach
19. Palpation of transverse colon, main features
20. Palpation of liver, diagnostic value of main symptoms
21. Palpation of spleen
22. Ways of determination of fluid in abdominal cavity
23. Comparative percussion of the lungs. Main percussion notes, their origin
24. Technique of topographic percussion. Topographic data of the lungs in the norm and pathology
25. Percussion of the heart-relative cardiac dullness, normal borders and their changes in the pathology
26. Percussion of the heart-absolute cardiac dullness, normal borders and their changes due to cardiac and extracardiac reasons
27. Percussion of the vascular bundle, diagnostic value
28. Percussion of liver, sequence, data in the norm and pathology
29. Percussion of spleen. Rules of determination, reasons of spleen enlargement
30. Auscultation of the lungs. Main breath sounds, their quantitative and qualitative changes
31. Auscultation of the lungs. Added breath sounds, classification, their origin
32. Determination of vocal resonance and its diagnostic value
33. Auscultation of the heart and vessels
34. ECG recording
35. Palpation of joints
36. Palpation of thyroid gland
37. Gastric lavage
38. Intestine irrigation: siphon enemas, cleansing enemas
